

Wasabi and Axis Communications Deliver End-to-End Surveillance Solutions Offering Hybrid Cloud Storage

Extending on-premise storage with AXIS Camera Station

Axis Communications empowers organizations with cutting edge IP video technology, helping to provide solutions that improve safety and operations. These intelligent video surveillance cameras and video analytics are capturing more evidence than ever causing an increase in storage capacity requirements. The demand for high capacity storage that is fast, secure, and affordable is greater than ever. Many small to medium sized organizations don't have the resources or expertise to manage exponential increases of video data while trying to combat ever-evolving security threats. By leveraging a combination of on-prem and cloud technology, Wasabi Surveillance Cloud for AXIS Camera Station provides a highly secure repository that supports higher camera counts, resolutions, frame rates, and retention requirements without the need for additional hardware beyond the existing server. New installations can easily develop a hybrid approach to storage unifying the benefits of on-prem and cloud-based storage.

Combining Intelligent Video Monitor Technology with Bottomless Cloud Storage

AXIS Camera Station is a powerful, yet easy-to-use video management software assisting users to manage the system, handle incidents, quickly find and export high-definition evidence, and manage physical access. AXIS Camera Station allows you to build a scalable solution that covers all your surveillance needs. Now with the ability to move video to Wasabi, the amount of footage that you can store is not limited to the size of the on-premises recording device. With Wasabi, you are able to scale incrementally as storage needs or retention policies change.

Wasabi Surveillance Cloud is a complete offering including the software bridge application and a Wasabi object storage subscription. When deployed with AXIS Camera Station, users can seamlessly integrate the functionality of the video management system with the accessibility of bottomless hybrid cloud storage. Users can automate the assignment of video data based on predefined policies addressing various workflow challenges - from data storage costs and transparent data migration to disaster recovery. Whether you store archived recordings locally or on Wasabi, you can always use AXIS Camera Station to view them.

KEY FEATURES

- Optimized bandwidth and storage savings
- Seamless archiving of video recordings to Wasabi
- Industry leading data security, durability, and compliance
- Fast and reliable access to video files whenever, wherever

BENEFITS

- Combine the flexibility of on-prem storage with the scalability of cloud storage
- Keep video integrity during defined retention periods
- View and manage live and recorded video directly in AXIS Camera Station video management software

Video Storage Costs That Are Predictable

From a cost perspective, AXIS Camera Station combined with Wasabi Surveillance Cloud provides powerful support for high-quality video surveillance infrastructures. While it's true that digital video consumes a significant amount of storage space, surveillance professionals historically shied away from cloud storage due to confusing pricing tiers and limitless fees charged for accessing stored recordings, or egress fees. With the predictable pricing structure and zero-fee access to video files, Wasabi Surveillance Cloud helps users better anticipate and allocate surveillance resources and budget.

Safe, Secure, and Tamper-Proof

Wasabi is deployed in fully secure and redundant data centers that are certified for SOC-2 and ISO 27001 compliance. The service is architected in accordance with industry-best security models and design practices. Organizations can configure their storage buckets to be immutable for a user defined retention period (in increments of days, weeks, months or years). Designated video files written to a protected bucket cannot be deleted or altered in any way, by anyone, throughout its storage lifetime. Immutability can help with compliance for state and local government regulations.

About Axis Communications

Axis enables a smarter and safer world by creating solutions for improving security and business performance. As a network technology company and industry leader, Axis offers solutions in video surveillance, access control, intercom, audio systems, and video analytics. Axis has around 4,000 dedicated employees in over 50 countries and collaborates with technology and system integration partners worldwide to deliver customer solutions. Axis was founded in 1984, and the headquarters are in Lund, Sweden. For more information about Axis, please visit our website www.axis.com

ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.
