

We Let You Manage All Your Networks From One Easy Dashboard

- Enable your acceptable user policy
- Run high bandwidth apps like video conferencing smoothly
- Securely manage all your devices
- Get performance visibility, and control your apps
- Enable the right devices and apps

Top 5 Things You Need to Know: ExtremeCloud™

Only With ExtremeCloud You Can Manage All Your Networks From One Dashboard

With ExtremeCloud, you can remotely secure your network, while onboarding devices, regardless of whether you manage a large enterprise or a distributed organization. This means, you can set the bandwidth for high priority applications and make sure users get an optimal experience. This is why enterprises and distributed organizations are turning to ExtremeCloud.

Unlike competitive solutions, ExtremeCloud:

- Offers an out-of-the box WiFi network for limited IT staff
- Let's you prioritize high-priority applications so they run smoothly
- Empowers you to control and manage the entire network remotely

Get a sneak peek of ExtremeCloud with this Top 5 List:

1 Only ExtremeCloud is Truly 'Plug and Play'

Pull the AP out of the box, plug it into your network, and voilà, it's up and running. Yes! It really is that easy. Unlike competitive offerings, no scanning of serial numbers required. Plug and play with automated self-provisioning and self-optimizing hardware, all to save you time.

2 Control Applications The Way You Want

Unlike our main competitor, that only allows you to permit or block applications — we let organizations prioritize their applications dynamically at the right time. Our intuitive dashboard shows you what applications are running at any time, how much bandwidth they use and what the usage patterns are. This empowers you to optimize bandwidth, block unwanted applications, avoid shadow IT and troubleshoot fast.

All your applications are visible with our robust fingerprinting technology that includes thousands of application fingerprints. In addition, you can dynamically add custom signatures for applications that you rely on. Our flow-based technology ensures that you get actionable application insights without compromising performance.

3 Business Policies Adapted to Your Business

ExtremeCloud makes it easy to automatically roll-out network policies that help keep your data safe. Control what applications, users, and devices access your network and receive alerts so you can prevent issues. Permit and deny applications and devices or users, manage QoS, and optimize bandwidth across your wired and wireless networks. All of this with one intuitive dashboard.

4 True Investment Protection – You Choose Your Solution

We know organizations always need to save money and resources. With ExtremeCloud you never rip out your switches and access points again. The same hardware works in the cloud or on premises.

So, if your organization grows too large or you want to switch to an on-premises solution for any reason, you can do it without losing your investment.

5 The Best Service and Support You Can Get

Unlike our competitors we insource our support 100%. We offer # 1 rated service and support, as voted by our customers.

Our award-winning customer service and support shows our radical commitment to the best service and support. We are here to ensure your experience with us is outstanding.
