

ENHANCED PATIENT CARE WITH RELIABLE SCANNING

Patients are becoming savvier and are having higher expectations of what excellent patient care should be – and it goes far beyond an office visit or single hospital stay.

XENON ULTRA FOR HEALTHCARE

The Xenon Ultra 1960h and 1962h healthcare scanners incorporate Honeywell's next generation of scanning capability – allowing patient care to stay top priority for clinicians, helping improve retention of employees and helping lower the total cost of ownership for hospitals.

DISINFECTANT READY ANTI-MICROBIAL HOUSING

Xenon Ultra's disinfectant ready housing is engineered with silver-ion additives to help improve resilience to multiple cleanings and discourage the growth of germs and bacteria.

PRECISE SCANNING

The green-dot LED aimer and white illumination aids in easier targeting and enhances scan accuracy on high density and low quality bar codes.

SLEEK DESIGN

The improved, modernized, and ergonomic design of the Xenon Ultra reduces the number of nooks and crannies where lingering germs may hide.

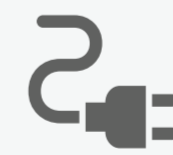

CONFIGURABLE MODES

Multiple operating modes are available to ensure maximum patient comfort while maintaining clinician productivity, such as Patient Do-Not Disturb, Vibration, and Scan Lamp.

SWAPPABLE POWER SOURCES

One cordless Bluetooth scanner can accept a standard battery or a super capacitor allowing users to better manage their device pool and upgrade post deployment between power options.

CONTACTLESS CHARGING

Helps reduce the risk of battery corrosion or wear-and-tear on communication base that may occur from numerous wipe downs. Compatible with the Xenon 1962 standard or battery free models.
