

Honeywell

▲ **EDGE⁺: Speed + longevity + optimized performance**

Help give your customers the edge they're looking for with Honeywell Mobility Edge's™ industry-leading mobility hardware and software. It's an edge that brings the power of a unified, dynamic platform when products built with Mobility Edge™ are deployed. Combine that with ScanSource's strategic services, and your customers will edge out the competition, every time.

WHAT IS THE MOBILITY EDGE™ PLATFORM?

Mobility Edge™ is a CHIP SET running SOFTWARE that can be inserted into many form factors. The "mobility" of the platform means designers and administrators don't have to "reinvent the wheel" for multiple devices. Instead, they can build and deploy ONCE and cover MANY different devices and applications.

WHY MOBILITY EDGE™?

With one software platform, development and deployment are quicker and easier. One round of testing and validation will cover multiple device types.

Mobility Edge™ extends the life cycle of mobile solutions across customers' enterprises, reducing cost and decreasing end-of-life risk. Through a partnership with Google, Mobility Edge™ can be updated to support four Android releases, OUTLASTING the competition. Mobility Edge™ will handle updates through 2023.

With deep experience in mobile device software and hardware, Honeywell looked back at more than 10 years of service and support data when creating the Mobility Edge™. As a result, it offers:

- Fast data capture
- Easy setup of user preferences and key apps
- Movable scan trigger
- Hot-swappable battery capability
- Wireless tethering
- Find My Device
- Enterprise Termination Emulation
